ELARE: THE TOUCH OF PN

ELARE is a professional line of skin revitalization treatments built on the power of **polynucleotides (PN)** to restore skin vitality, firmness, and resilience. Each product is developed with clinical precision to provide safe, visible, and long-lasting results.

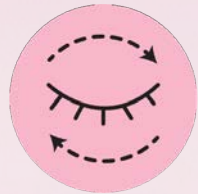

Product	Key Ingredients	PN Concentration	Unit Packing	Shelf Life
ELARE EYES	PN (Polynucleotide), Succinic Acid, Niacinamide	0.5 %	1.1 ml / 1 syringe	2 years
ELARE FACE	PN (Polynucleotide)	2 %	2 ml / 1 syringe	2 years

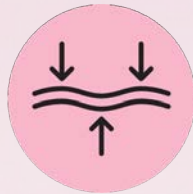

ELARE EYES

Elare Eyes is a targeted formula with **PN, succinic acid, and niacinamide**, designed for the delicate eye contour. It brightens, smooths, and revitalizes while being gentle on sensitive skin.

Main Benefits

Reduces dark
Circles & puffiness

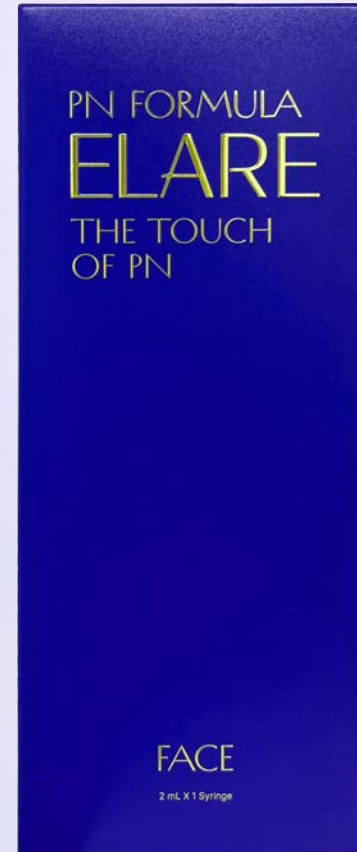

Smooths
fine lines

Brightens &
refreshes eye area

Recommended for individuals with tired, aging, or sensitive eye contours, concerned about dark circles or early signs of aging.

ELARE FACE

Elare Face is a concentrated skin revitalization treatment with **PN**, formulated to restore elasticity, firmness, and overall skin health. By stimulating collagen production and cellular repair, it delivers visible improvements in texture and tone.

Main Benefits

Boosts skin
regeneration

Improves firmness
& elasticity

Enhances
hydration & vitality

Individuals seeking overall skin rejuvenation, anti-aging support, or post-procedure recovery.

MAIN INGREDIENTS

ELARE EYES

Elare Eyes is carefully designed for the delicate eye contour, combining a gentle dose of 0.5% of PN with **succinic acid** and **niacinamide**.

PN provides regenerative support without irritation, while succinic acid calms puffiness and supports cellular energy. Niacinamide brightens dark circles, strengthens the barrier, and enhances smoothness.

Together, these actives deliver targeted care—reducing dark circles, puffiness, and fine lines—leaving the eyes refreshed, luminous, and youthful.

ELARE FACE

Elare Face delivers intensive rejuvenation with a concentrated 2% polynucleotide (PN) formula.

PN stimulates fibroblast activity, boosts collagen and elastin production, and repairs the extracellular matrix to restore firmness and elasticity.

The higher concentration is specifically chosen to maximize regenerative power across the full face, improving texture, hydration, and visible signs of aging.
