New Beauty

Firmosa

We are professional in aesthetic medical technologies. The Company sells its products under four distinct brands,Hyaluronic Pen,PDO Thread,Blunt Cannula and Dermal Filler.

Our technology enables physicians to provide excellent solutions for a broad range of medical-aesthetic applications including face and body reshaping,resurfacing skin,eliminating fine lines or wrinkles treating scars,or removing unwanted hair.

We can also provide OEM and ODM service to meet the inquiry from customerand distributor. Besides we are willing to support customers to be our agent. The products are exproted to many countries such as US,UK Italy,Germany,Austrialia,Singpore,Japan,Mexico,Brazil etc.

We’ ve built in the easy of use,versatility,intuitiveness and value that allow physicians to do what they do best. Every thing we do is only for helping you to purchase the high quality beauty equipment for the health of you and your clients.We believe only in the way can maintain our partnership and keep in win win situation. We always keep challenging to build our products in safe and easy to use, and then to make our customers fell affinity.All of these turn out to be high quality products.

Company Introduction

New Beauty

Firmosa

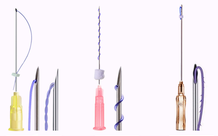

What is the Firmosa thread?

PDO / PCL/ PLLA threads have rapidly become a popular minimally invasive alternative to surgical facelift procedures and have given rise to the emerging cat eye, V–line, and snatched jawline trends.

Dermal Filler

Injectable hyaluronic acid filler

Firmosa is a series of cross linked wrinkle filler based on hyaluronic acid with immdeiate results that last between 9 to 18 months.It is with BDDE cross-linked HA gel, high viscosity, that are used to treat signs of aging.

Fine

Fine correction suitable for even tiny lines.

Derm

Correction of average lines and wrinkdes.

Deep

Used for re-establishing the volume deficit within the skin tissues and for filling in deep wrinkles.

Subskin

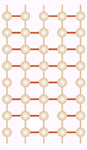

Subskin with biggest particle size and greatest viscosity is the bestchoice forpenis inejciton. Used forvolume restoration and the shaping of body surfaces,for example, shaping of the breasts, calves andibuttocks

Firmosa Max Hyaluronic Acid Filler

Firmosa Max Hyaluronic Acid Filler has a smoother texture.
The smoothness of Firmosa Max Hyaluronic Acid Filler makes it better at addressing finer lines and wrinkles in tight facial areas.

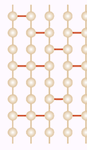

New Cross-Linking Technology

More cross-linked

Smooth consistency

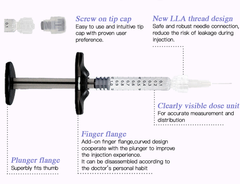

Less cross-linked

Granular consistency

Pre-Fillable Syringe

- Proprietary cross-linking and homogenization
- Uniform extrusion force and smooth flow
- Random sizes and shapes that result in a smooth-consistency gel
- Results in a unique 3D matrix that is strong and robust, yet still soft and smooth

Utilized Location

Firmosa Max Hyaluronic Acid Filler are uniquely designed to give you volume where you need it.

Non Cross Linked

Hyaluronic acid gel

- Sodium Hyaluronate Injetction Repairing cartilage Relieving pain
- Relieves joint pain Protects tissues around joints Slows joint disease
- Moist eyeballs for ophthalmic surgery

New Beauty

Firmosa

UniCaHA™ CaHA Filler

UniCaHA™ Dual is a sterile, biodegradable, nonpyrogenic, viscous, opaque, semisolid, latex–free for dermal fillers.UniCaHATM Dual is intended for deep dermal to subdermal implantation for the correction of moder–ate to severe facial wrinkles, folds and volume increase, such as nasolabial folds, marionette lines, jawline, cheeks and nose.

Core Ingredients

- **Hyaluronic Acid**

24 mg/mL of cross–linked hyaluronic acid (HA) Originated from microbial fermentation, with no animal origin ingredients. Cross–linked HA can achieve timely filling effect, and supply better support and over 6–month long treatment duration.

- **Lidocaine**

0.3% lidocaine can effective reduce the pains caused by injection, supply comfortable injection experience.

- **Calcium Hydroxyapatite**

56% CaHA Microspheres with smooth surface, particle size 25–45 μm, fully chemically synthesized.

Application

1.1ml/Pc

1 Temples

2 Nose

3 Cheeks

4 Nasolabial Folds

5 Chin

6 Marionette Lines

7 Jawline

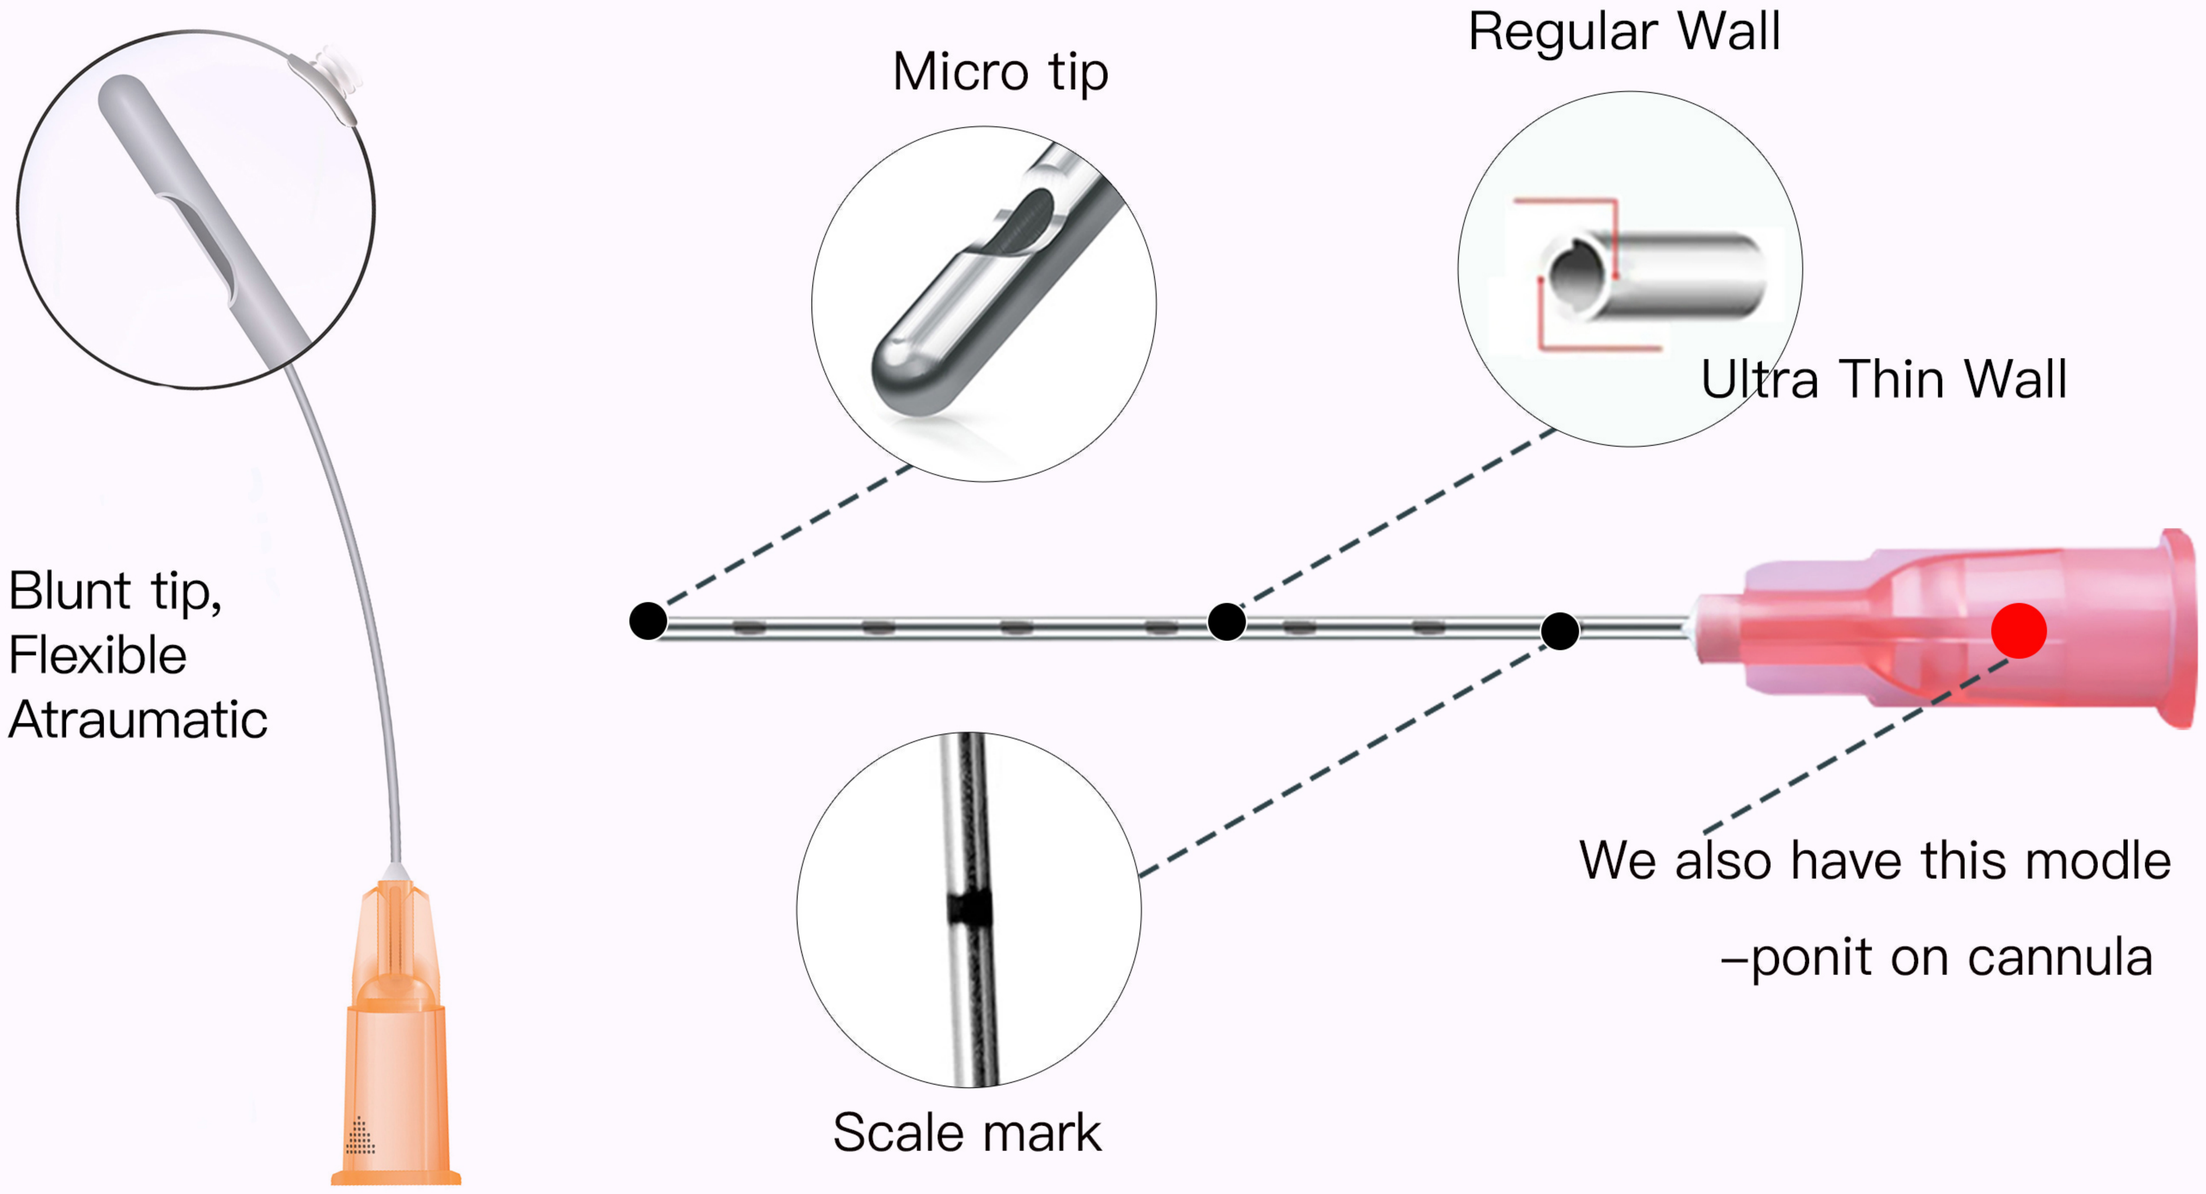

Blunt cannula

The blunt–tip microcannula is a small tube which is designed for ataumatic intradermal injections .

Depending on the size of the inter diameter:

It can beused either for fat transfer or for the injections. For fillers,like hyaluronic acid filler,collagen,polyl–alactic acid.

Packaging

Poly-L-Lactic Acid Second generation

Angelfill Poly-L-Lactic Acid Filler For injection is a dermal tissue filler, administered by injection into the deep layers of the dermis to achieve wrinkle-filing effects.

MECHANISM OF PLLA

The treatment is ideal for consumers 30+ who are concerned with skin aging, dermal deficiencies, laxity and areas prone to volume loss, such as the cheeks, temples and nasolabial lines.

Before injection
Depression before treatment.

0-1 days after injection
PLLA injection immediately filled in the depression.

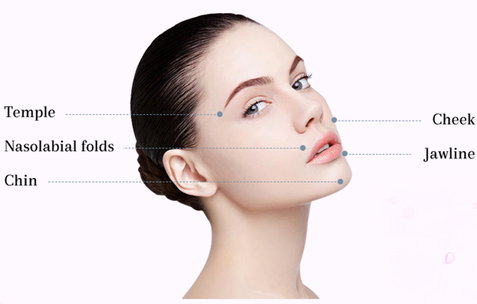

3-4 days after injection
A few days after the first treatment, the water in the material is absorbed by the body, and the depression recovered slightly.

7-14 days after injection
The body's fibrous connective tissue builds and eliminates depressions and defects are elimi-

28 days after injection
After about 4weeks, the improvement effect can be clearly seen, but deeper depression needs further

MECHANISM OF PLLA

3 treatments, spaced 4 weeks apart.
Noticeable improvement can be seen 4 weeks after the first application.

Red Ampoule Solution

It is the world's first addition of highly concentrated vitamin B12 and other active ingredients for rapid fat decomposition, promote rapid fat decomposition, and quickly exclude it from the body.

Different from the traditional fat-dissolving needle, it improves the shortcomings of the traditional fat-dis-solving needle, such as easy pain, redness and swelling, and slow effect.It has been certified for its high safety, quick effect and little side effects.

Hyaluronidase

Hyaluronidase, also known as hyaluronidase or hyaluronidase for injection, is a type of hydrolysis Hyaluronic acid. Hyaluronidase is a natural enzyme that hydrolyzes hyaluronic acid. It eliminates Inappropriate injec–tion of the site to eliminate excessive injection of hyaluronic acid, resulting in elimination rate 90%.

Mainly used for the repair of glass acid shape failure. Hyaluronan lyase is a kind of Dissolve hyaluronic acid. After injection of hyaluronic acid, it does not feel good after beauty. It can dissolve in Hyaluronic acid is in 48 hours and then it can be filled with hyaluronic acid again.

Uses of Hyaluronidase Injection:

1.To remove filler, hyaluronidase can be injected to dissolve the hyaluronic acid in dermal fillers.
2.To increase the effect of lipodissoving injection, hyaluronidase can be added to the cocktails of fat melt–ing injection.
3.Hyaluronidase is often combined with local anaesthetic to increase the diffusion of local anaesthetic.

Skinbooster

Meso Secret@ is injectable Non cross-linked hyaluronic acid . sterile, biodegradable, nonpyro-genic, viscoelastic, clear, colorless, homogenized Intended to be used for Mesotherapy.

- Volume(ml): 2.0mL 20mg/mL

Treatment

- firm the skin
- prevent wrinkless
- Hydrating the dermal skin
- preparation of the skin before filler injections

Packaging

Skinbooster

Meso Secret@ is Non cross-linked hyaluronic acid Injectable gel. sterile,biodegradable, nonpyrogenic, viscoelastic, clear,colorless,homogenized gel. Intended to be used for Mesotherapy.

Ingredient

- Hyaluronic acid 20mg/ml.

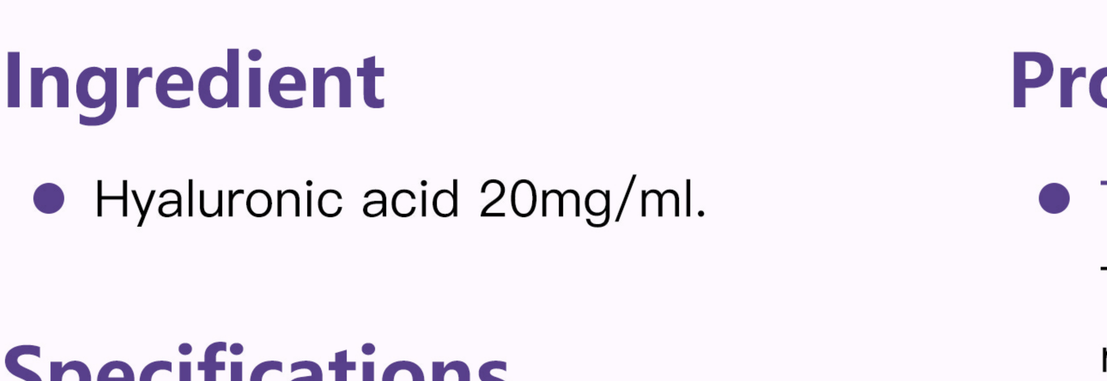

Specifications

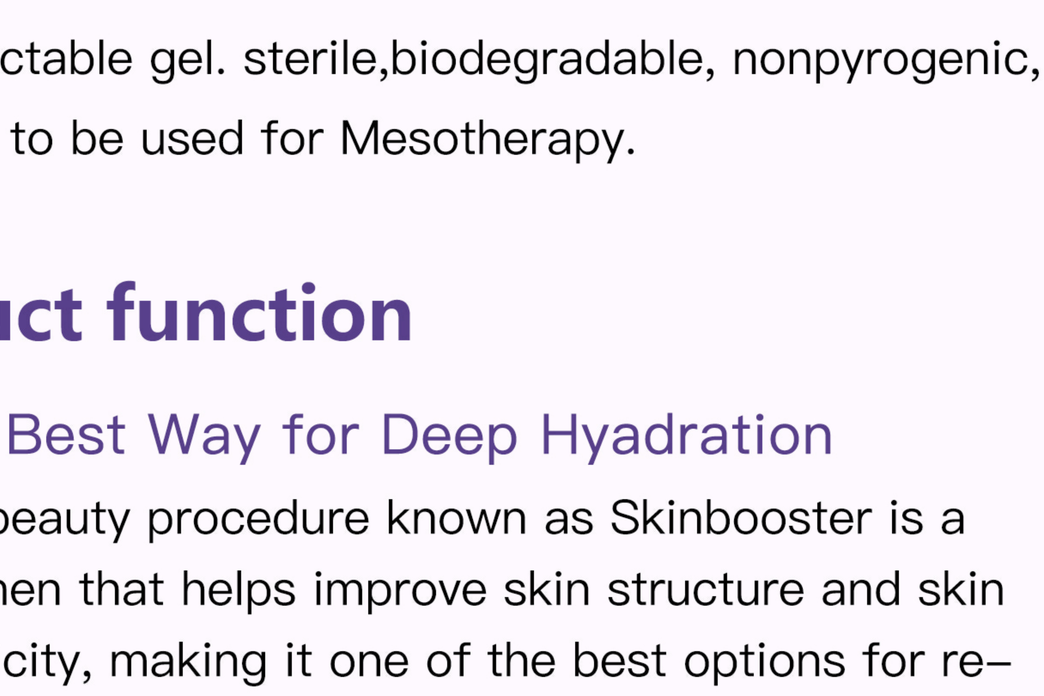

- 3.5ml x 2 Vials

Product function

- The Best Way for Deep Hyadration

  The beauty procedure known as Skinbooster is a regimen that helps improve skin structure and skin elasticity, making it one of the best options for re-juvenation.

Meso Secret Pdrn

HYDRO PDRN is a colorless or white translucent viscous solution, and the water used for its preparation is water for injection.

Improved areas

1 Forehead area

2 Crow ’ s feet

3 Smoker lines

4 Smiles lines

5 Neck area

6 Hands

7 Decolletage

Our advantages

The product is used for injection into dermis.It mainly improves skin elasticity and brightens skin tone through the moisturizing and hydrating effects of materials such as sodium hyaluronate.

Product Introduction

This product consists of prefilled syringe and a complex solution encapsulated in the prefilled sy–ringe. The complex solution consists of non–cross–linked sodium hyaluronate ,trace amounts of cross–linked sodium hyaluronate ,polydeoxyribonucleotide(PDRN),sodium chloride ,disodium hy–drogen phosphate , sodium dihy drogen phosphate and water for injection.The product is sterilized by moist heat and is for single use. The product is valid for 2 years.

Firmosa

Numbing Cream

J Cain is a numbing cream with anesthetic effects. It has a nerve–blocking impact on the applied area to reduce any skin irritations, pain, and discomfort. J Cain numbing cream can be used as a numbing agent before uncomfortable procedures involving needles like a hyaluronic acid injection, anti–aging injection, lip–olytic solution injections, and a lot more.

Advantages

01

It is excellent for reducing any pain by numbing your nerves down, which is per–fect for procedures that in–volve injections.

02

It can be used to lessen any pain and discomfort, such as insect bites, sunburn, minor scratches, and many more.

03

It is easy to apply since it is in a semi–liquid form , your skin will be able to absorb it fasterwhich makes the effect of the cream spread more quickly.

Luer Syringe Connector

The luer connector allow for easy transfer of contents between
two syringes or two female luer lock fittings. This product may be used for refilling, measuring,

Product advantages

- PP material, more durable
- Double helix design, with anti-side leakage
- Sterility, making the product safer to use
- Individual package, clean and hygienic is more convenient and prevent pollution

Features

The luer connector can be applied to many fields such as biochemical analysis, water analy-sis,cell culture, circumstance testing, inkjet printing and supply,thermal engineering, pressure calibration, pressure measurement refrigeration, disinfection, teaching, scientific research ex-periments, etc.
The syringe adapter can be widely usable, specially in some precision scientific equipment in the low pressure gas liquid fluid system and many other general areas.

Absorbable Sutures with Needles

A surgical suture, also known as a stitch or stitches. There are numerous types of suture which differ by needle shape and size as well as thread material and characteristics. Selection of surgical suture should be determined by the characteristics and location of the wound or the specific body tissues being approximated.

Types of Sutures	Description
Polyglycolic Acid (PGA)	Synthetic,absorbable, braided suture with weedle or without needle
Rapid Polyglycolic Acid (PGAR)	
Polyglactin 910 (PGLA)	
Polydioxanone (PDS)	Synthetic,absorbable, monofilament suture with weedle or without needle
Poliglecaprone 25 (MO)	
Chromic Catgut (CC)	Absorbable suture with weedle or without needle
Plain Catgut (CP)	

Non-Absorbable Sutures with Needles

A surgical suture, also known as a stitch or stitches. There are numerous types of suture which differ by needle shape and size as well as thread material and characteristics. Selection of surgical suture should be determined by the characteristics and location of the wound or the specific body tissues being approximated.

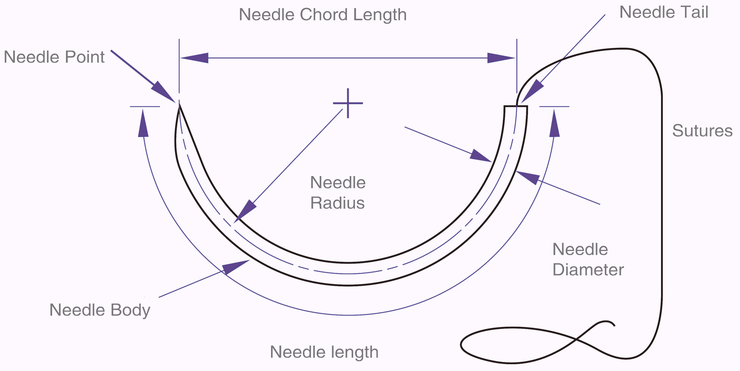

Types of Sutures	Description
Silk(SK)	Non-absorbable,braided,natural suture with needle or without needle
Nylon(NL)	Synthetic,non-absorbable, monofilament suture with weedle or without needle
Polypropylene (PM)	Synthetic,non-absorbable,braided suture with weedle or without needle
Polyester(PB)	
Stainless Steel Wire(SS)	Synthetic,non-absorbable,monofilament suture with weedle or without needle

Barbed Suture

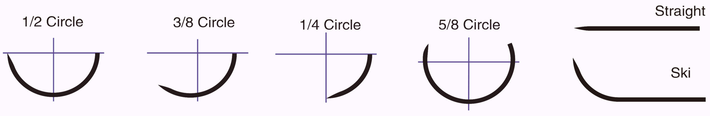

Surgical barbed sutures is a time-saving closure device that eliminates the need to tie knots to secure the closure. The helical barbed design evenly distributes tension offering a unique combination of security and speed—increasing both efficiency and value.
